DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parts et al, U. S. Patent 3,825,520.

Reference to Parts et al teaches the claimed compositions of polystyrene with a brominated flame retardant as required and the claimed phthalocyanine compounds taught, with three of the five metal phthalocyanine compounds exemplified meeting the ones in the claims. Proportions of components as taught overlap those as claimed. The use of phosphorus compounds in addition to the other components is also taught although not specifically recommended. The examiner takes official notice that the use of blowing agents and the making of foamed articles from polystyrene are both well known in the art. It would, therefore, be prima facie obvious to one of ordinary skill in the art to combine the claimed components in the claimed proportions absent evidence of unexpected results commensurate in scope to the claims.
